

Calla Lily 100

Dip treatment to resist browning

powder

Calla Lily 100 dip treatment helps to improve the quality of the flower head of calla lilies by helping to reducing (or delaying) the tip browning of the spathe. The treatment will be applied at the farm level immediately after harvest.

For Growers: Use in pre- and post- grading.

Features and Benefits

- An easy dip for calla lily crops.
- Keeps calla lily spathes fresher.
- Can be used with other Floralive® hydration treatments.
- Helps reduce flower scrap.

Directions for Use

- Follow the instructions on the product label.
- The Calla Lily 100 powder should be dissolved in water at 0.5 g / L rate to prepare use solution.
- The user can prepare 20 L of use solution by dissolving the powder from one scoop (10 g) in 20 L of water. Make sure all the powder is completely dissolved in water.
- The flower heads of harvested calla lilies should be dipped in this solution for 5 seconds.
- Allow the flower heads to dry at least 3 hours before packing for transport (If a Floralive® hydration treatment is done to the harvested calla lilies, the hydration treatment can be done while waiting for the Calla Lily 100 dip treatment to dry).
- Solution treats 25 flowers per 1L batch of use solution (20 L:500 Flowers).

Dosage

- Dissolve Calla Lily 100 powder in water at 0.5 g / L rate.
