

PAL 100

Treatment for cut Lily and Alstroemeria

tablet

PAL 100 Lily and Alstroemeria hydrating treatment is used by growers and bouquet makers on lilies and alstroemeria to maintain healthy foliage and flower heads. Place the flowers in the solution containing PAL immediately after cutting or processing. PAL 100 treatment for cut Lily and Alstroemeria aids in water uptake, keeping stems free flowing.

For Growers: Use in pre- and post- grading coolers for maximum water uptake.

For Wholesalers and Bouquet Makers: Use as a treatment looking to assure flowers a full hydration before transferring into florist shops and supermarkets where stressful shipping or storage in improper temperatures might occur.

Features and Benefits

- Keeps foliage and flowers fresher.
- Lowers the water pH which increases hydration.
- Can be used on all flower types, including mixed premade cash-and-carry bouquets.
- Effective at room temperature and in storage coolers.
- Prevents bent neck and wilting foliage.
- Inhibits stem blockage.
- Product is clear in all water types.
- Helps reduce flower scrap.

Directions for Use

- After flowers have been treated with PAL 100 treatment for cut Lily and Alstroemeria by the grower and shipped, a retailer should treat flowers with a hydration solution and then transfer to a fresh flower food solution.

Dosage

- 1 Tablet per 2 quarts (2 liters) of water. Minimum treatment time is 24 hours. Solution can be used up to 3 days.

Container Sizes Available

- 500 tablets
