Procedure for Maintenance of FloraCare® Dosing System

Background

Flower food must be used at the proper concentration to obtain maximum benefit to aid in flower longevity. Either over- and under- dosing can reduce the effectiveness of all flower foods and also could result in negative effects on the flowers. Flower food usually comes as a concentrate which needs to be diluted with water before use. Floralife[®] FloraCare[®] dispensing systems accurately measure, mix and dispense flower food. Periodic cleaning and maintenance are critical for optimum performance of these dosing systems. Following is the recommended cleaning procedure for FloraCare[®] injector units which should be one of your monthly store tasks for best flower performance.

For use with:

- Floralife Crystal Clear® flower food
- Floralife Clear Professional[®] flower food
- Floralife Clear Professional® 2X ULTRA flower food
- Floralife® Special Blend Pure Water® and Floralife® Special Blend Hard Water® flower foods
- Floralife[®] Hydraflor[®] 100 pre-treatment

Remove the injector tube which is in the flower food concentrate tank out of the drum and put it into a clean plastic container filled with ¹/₄ gallon Floralife[®] D.C.D.[®] disinfectant cleaner.

- 2. Set the dosing injector to the 1% ratio.
- Run the ¹/₄ gallon of Floralife[®] D.C.D.[®] disinfectant cleaner through the injector system (properly discard the dispensed solution) and then let the injector soak overnight, for a minimum of 8 hours.
- 4. Wipe the unit clean with a warm wet cloth to remove any existing residues.
- 5. The following morning, remove the tube from the Floralife® D.C.D. disinfectant cleaner drum and rinse the tube with clean water. Place the tube back into the flower food concentrate.
- 6. Reset the dosing injector to the correct setting based upon the flower food used *(see label instructions).*
- 7. Let the injector system flush any remaining Floralife[®] D.C.D.[®] disinfectant through the system until flower food solution is coming through the dispensing unit *(approximately 2 minutes).*
- 8. Resume use of the injector system with Floralife[®] Fresh Flower Food for flower processing.

Board Dimensions: 13" x 22' Clearance Required: 6 1/2"

For use with:

- Floralife[®] Original flower food
- Floralife Professional[®] flower food
- Floralife Professional[®] 2X ULTRA flower food

Note: The following instructions are a 2 step process and cannot be combined. DO NOT MIX Floralife[®] Hydraflor[®] 100 pre-treatment and Floralife[®] D.C.D.[®] cleaner together into one solution.

- 1. Remove the injector tube which is in the flower food concentrate tank out of the drum and put it into a clean plastic container filled with 1 gallon of Floralife[®] Hydraflor[®] 100 pre-treatment or Floralife Quick Dip[®] hydration solution.
- 2. Set the dosing injector to the 1% ratio.
- 3. Run ¹/₂ gallon of the Floralife Hydraflor[®] 100 pre-treatment through the system, letting it soak overnight.
- 4. Wipe the unit clean with a warm wet cloth to remove any existing residues.
- 5. The following morning, remove the tube from the drum and insert the tube into a clean plastic container filled with Floralife[®] D.C.D.[®] disinfectant cleaner.
- 6. Run ¹/₂ gallon of Floralife[®] D.C.D.[®] disinfectant cleaner through the system at the same 1% setting.
- 7. Remove the tube from the Floralife[®] D.C.D.[®] disinfectant cleaner, rinse it with clean water, and then place it into the Floralife[®] flower food concentrate product.
- 8. Reset the dosing injector to the correct setting based upon the flower food used.
- 9. Flush the remaining Floralife[®] D.C.D.[®] cleaner through the injector system until the flower food solution comes through the dispensing unit *(approximately 2 minutes).*
- 10. Resume use of the injector system with Floralife® Fresh Flower Food for flower processing.
