

FloraLife® Hydrate Hydrangea

FloraLife® Hydrate Hydrangea is specifically formulated to increase flower quality through the supply chain and consistently results in better vase life performance. It hydrates and conditions hydrangeas after harvest and after a period of dry storage. This unique product relies on new technology specifically formulated for hydrangeas to enhance the flow of liquid through the flower stems to provide long lasting hydration and prevent premature and unpredictable wilting.

USAGE

- Mix your solution in a clean bucket. For every 1 litre of water, mix 5 ml of FloraLife® Hydrate Hydrangea in a clean bucket. We advise the use of a dosing system for ease and accuracy.
- Remove foliage from the stem area which will be located below the solution level.
- Recut stems with a clean, sharp knife or cutting tool, taking off 1 inch (3 cm).
- Place cut hydrangea stems in the mixed solution.
- Place the hydrangeas in a cooler for 24 hours.
- After 24 hours, remove the hydrangeas from the cooler and place into a flower food solution such as FloraLife® Express 300.

DOSAGE

5 ml / 1 L

BENEFITS

- Specifically formulated for the hydrangea crop.
- Provides optimal vase life and prevents premature and inconsistent wilting.
- Improves water uptake.
- Contains acidifiers to lower pH of the water and enhance hydration.
- Maintains cleaner hydration solutions to reduce stem blockage.
- Effective at room temperature and in storage coolers.
- Reduces volume of water used after harvest - saving costs as it can be used for hydration and transport.
- Prepares hydrangeas for dry shipment.
- Rehydrates hydrangeas after a period of dry storage or transportation.
- Helps reduce flower scrap.
- Compatible with end-of-stem bags.

Item Code	Container	Size	Case Pack
80-82017	Jug	1 gal / 4 L	6
80-82018	Pail	5 gal / 19 L	1
80-82019	Drum	30 gal / 114 L	1
80-82020	Tote	264 gal / 1000 L	1
