

FloraLife® HYDRABASIC

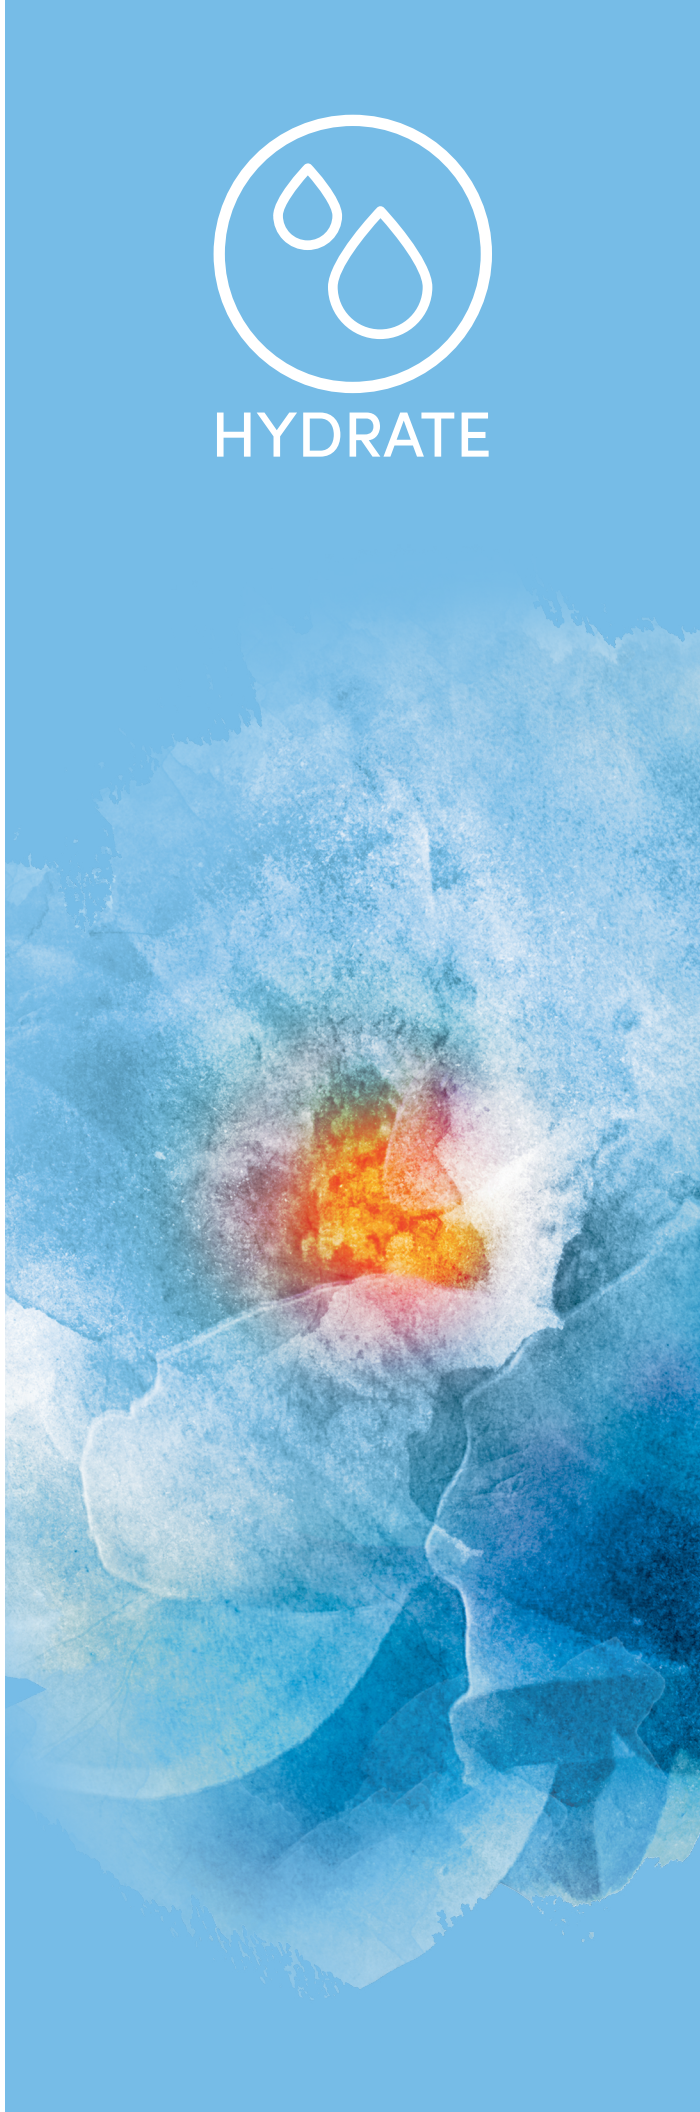

Concentrated liquid short-term hydration product for the initial postharvest treatment of fresh-cut flowers.

HYDRATE

www.FloraLife.com

DESCRIPTION: FloraLife® HydraBasic is a concentrated hydration treatment formulated for the initial stage of postharvest care, offering a liquid, chlorine-free alternative to chlorine-based and powder products. Designed for diversified crops, the solution can be used for up to two days and it provides hydration before flowers move on to further processing.

CATEGORY: Hydrate

USE: All fresh-cut flowers.

BENEFITS:

- Concentrated formula, effective at low dosing (1 ml/L).
- Ensures proper hydration and flower freshness.
- Chlorine-free formula.
- Liquid formula is automation-ready.
- Initial post-harvest hydration.

WHO: Growers

WHY:

- Available versions for all water types including a specifically formulated formula for low alkalinity water.
- For the initial stage of postharvest care, the solution ensures that flowers receive the hydration they need immediately after harvest or after dry transport from the field.
- Compared to chlorine-based, powder and other traditional treatments, FloraLife® HydraBasic is a liquid, chlorine-free formula that is safer to handle, easier to dose, and compatible with automation systems.

ITEM CODE	Description	SIZE
80-51046	FloraLife® HydraBasic	20L
80-51044	FloraLife® HydraBasic Pure	20L

DOSING:

- 1 ml/L solution (or 0.1% injection system setting).

USAGE:

- Remove foliage below solution level.
- Cut bottom of stems with a clean, sharp knife or cutting tool, taking 1 inch or 3 cm off.
- Place stems in solution for 2–4 hours at room temperature (longer if in cold storage).
- Change solution at least twice weekly or when cloudy. The solution will not be effective if contaminated; it should be changed if it becomes cloudy due to contamination with debris, leaves, or microorganisms.

Do not use metal containers to prepare the solution.
